

Grass Shredder Plate

MKT-GS-P3

Fits Minnkota® trolling motors with Propeller and Skag on opposite ends

1. Place the saddle flush against the edge of the trolling motor housing. **CAUTION:** The **shredder plate edge** must be at least 1/4" away from the propeller blade. Reason: (a) so that the propeller blade will not scrape against the shredder plate; and (b) at high speed the propeller blade will flex.
2. Secure the assembly to the trolling motor housing using the Heavy Duty Stainless Steel black powder coated clamp.
